

Betsi Cadwaladr

Johnson Controls in clean bill of health at Betsi Cadwaladr

Project overview

Betsi Cadwaladr University Health Board is the largest health organisation in Wales. It provides a full range of primary, community, mental health and acute hospital services for a population of around 676,000 people across North Wales, as well as some parts of mid Wales, Cheshire and Shropshire. It is responsible for the operation of three district general hospitals (Ysbyty Gwynedd in Bangor, Ysbyty Glan Clwyd in Bodelwyddan and Wrexham Maelor Hospital). This is in addition to 18 other acute and community hospitals and a network of over 90 health centres, clinics, community health team bases and mental health units.

Ysbyty Glan Clwyd hospital in Denbighshire, North Wales has undergone a major refurbishment project. As part of this work, Johnson Controls was chosen to work alongside main contractor Laing O'Rourke and electrical contractor Crown House – as well as working directly for the Betsi Cadwaladr University Health Board, to deliver upgrades to the CCTV, access control system and intruder alarms to ensure the hospital benefits from the highest levels of security.

"This refurbishment work is important for improving the environment and service provided inside the hospital for both patients and staff. Thanks to Johnson Controls, we now have significantly upgraded security and access measures in place which will improve safety for patient and staff alike."

Rod Taylor, Estates Director of Betsi Cadwaladr University Health Board.

Product and services applications

- IP-enabled CCTV cameras and recorders
- Access control system
- Intruder alarms

Customer needs

The refurbishment of Ysbyty Glan Clwyd was an extensive project. As such, a programme of this scale presented an ideal opportunity to upgrade the security systems at the same time to ensure the site would benefit from modern, reliable safety and security systems.

Johnson Controls solution

Johnson Controls has significantly upgraded the existing equipment. New Johnson Controls IP-enabled CCTV cameras and recorders have replaced the old analogue system, while new intruder alarms have also been installed, in addition to a new access control system, which is expandable and can be used in the future to cover a number of the board's remote sites.
